## Education

**Northeastern Illinois University** — Chicago, IL
*Bachelor of Science in Computer Science, Concentration in Data Science* — *Aug. 2023 – Dec. 2025*

## Projects

**Intrusion Detection System** | *Python, Scikit-learn, XGBoost, Pandas* — Dec 2025

- Developed a machine learning-based intrusion detection system to classify network traffic as benign or malicious using the CIC-IDS2017 dataset
- Built a complete ETL pipeline: removed Heartbleed flows (out-of-scope vulnerability class), eliminated destination port to prevent data leakage, dropped near-zero variance features, and applied StandardScaler normalization — reducing 78 raw features to a clean, model-ready dataset
- Built routines for training classification models including XGBoost, achieving high accuracy, precision, recall, and F1-score from a reduced 6 features of the original 79
- Evaluated model performance using confusion matrices, ROC-AUC curves, and F1-scores across 79 traffic categories, providing interpretable reporting on detection performance per attack type.

**Powerlifting Competition Assistant** | *Python, Django, Selenium, BeautifulSoup, Git,* — May 2025 – Apr 2026

- Built a full-stack analytics application used by powerlifting coaches to make real-time attempt selection decisions during live competitions — eliminating guesswork from a high-stakes 1-minute windows
- Engineered a scraping pipeline targeting dynamically rendered competition pages, processing semi-structured HTML into clean, structured datasets ready for analysis.
- Designed an ETL workflow that transformed raw scraped athlete data into normalized records, automating data extraction
- Integrated data processing backend with a Django web interface to surface actionable recommendations to non-technical coaches

## Experience

**Data Engineering Intern (The Chicago Lead Project)** — June 2025 – Aug 2026
*Northeastern University & Northwestern University* — *Chicago, IL*

- Built and end to end data pipeline using python (Selenium, BeautifulSoup) to automate extraction of district improvement plans
- Developed Flask based backend service to ingest and integrate external API data into centralized database
- Designed and implemented a normalized database schema
- Led weekly client and team meetings, bridging business objectives and technical execution by converting evolving requirements into structured data workflows and deliverables

**Peer Leader** — Aug 2025 – Dec 2025
*Northeastern University* — *Chicago, IL*

- Conducted weekly workshops for undergraduate CS students on data structures, algorithmic reasoning, and debugging
- Provided 1-on-1 tutoring in machine learning and NLP, guiding students through preprocessing pipelines and model implementation from scratch

**Everyone Can Code Participant** — June 2019 – Aug 2019
*SER Central States* — *Chicago, IL*

- Collaborated in a 4 person team to design and ship a functional iOS prototype in Swift
- Presented the application to community leaders and executives at the Apple Store Chicago App Showcase.

## Technical Skills

**Languages**: Python, Java, SQL, JavaScript, HTML/CSS
**Data Science & ML**: pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, XGBoost, TensorFlow, PyTorch
**Data Engineering & ETL**: Selenium, BeautifulSoup, JSON/CSV processing, API integration
**Web Development**: Django, Flask, ASP.NET Core, Bootstrap
**Databases**: PostgreSQL, MySQL, SQLite, SQL Server
**Developer Tools**: Git, Docker, Linux, VS Code, Visual Studio, IntelliJ, Eclipse, Jupyter, Anaconda, PhP myAdmin
